

AMENDMENTS TO THE SPECIFICATION

IN THE SPECIFICATION

Page 8

Please amend the paragraph beginning at line 9, through line 17 as follows:

The carrier component of the present invention is obtained by contacting a magnesium halide with a C₁₋₂₀ alcohol (hereinafter, this contact is referred to sometimes as "first contact") and then contacting the product with an organoaluminum compound represented by the following general formula (Z) (原文間違い) (AlR_nX_{3-n}) (hereinafter, this contact is referred to sometimes as "second contact"), but the method of preparing the carrier component of the present invention is not limited to this preparation method.
